How the market connects to the MCA portal

SPICe+ and ROC filing tools in India: what vendors show, and what they do not

Prepared for SBC · 5 November 2026 · Public sources only. This review tested no vendor. It is not legal advice.

Software that files on the MCA V3 portal from its own screen exists today. This review found no official MCA filing API behind it, and no tool that shows filing with no person involved.

1. **Three tools act on the portal.** ComplyRelax, Gen CompLaw and Leagully use an MCA login that the user gives them, then work on the portal from their own screen.[1,3,6,10]
2. **Only Gen CompLaw shows a SPICe+ path.** Its guide covers Part A, Part B and the eMoA and eAoA forms. That guide dates from December 2022, so a live demo must confirm it.[6,7]
3. **A person is still in the visible flows.** Leagully shows a person typing the OTP, uploading the signed form and clicking pay.[10] Gen CompLaw's guide has the user preview and submit.[6] ComplyRelax's videos do not show OTP or signing.
4. **Vendors do not publish their method.** Words like "integration" and "API" rarely come with detail. This review found no MCA filing API. A March 2026 government note mentions APIs for data dissemination, and API Setu's MCA material covers company details.[15,26,29]
5. **A product on the market is not proof of permission.** This review found no MCA approval for any tool. A CS or counsel must answer the legal questions.

The four patterns

Software · Person · MCA portal

A. Prepare only

CSTrax, AutoROC

Tool prepares form or PDF / JSON → Person logs in and enters or submits → Portal

Lowest risk. The tool holds no MCA login, but double work remains on the portal.[13,14]

B. Desktop push

Gen CompLaw

Desktop software prepares form → Saves it on portal under chosen MCA ID → Portal → Person previews and submits

Runs from the user's own PC. It also reads application status, PDFs and resubmission remarks.[6,7,8]

C. Cloud plus local agent

ComplyRelax

Cloud app prepares form → Gateway → Windows agent on user's PC → Portal

The user installs the agent as administrator and adds an MCA ID and password. The video shows "connected to gateway". The last arrow is an inference: the vendor does not say which part calls the portal.[1,2,3]

D. Cloud background

Leagully

Cloud app with stored MCA login → Person types OTP → Background submission → Portal → Person uploads signed form, pays

The most automated flow shown. The vendor does not disclose how the background step works. Its video covers DIR-12, and its pages do not list SPICe+.[10,11,12]

Not filing tools: Meon, Decentro, Surepass and Qorpiq sell company and director lookup.[17–20] InstaFinancials uses client MCA logins for read-only work under written agent terms.[16] OneFinOps claims API submission for some forms, but names no form and shows no MCA document.[15] NSWS is an official second channel that forwards incorporation applications to MCA; this review found no public API for it.[28]

Who does what at each stage

This table records only what each vendor's pages and videos show. "Not shown" does not mean the tool cannot do it.

	Prepare data	MCA login	OTP	Enter on portal	Webform submit	Sign DSC	Upload signed	Pay	Track status
ComplyRelax	Software	Stored	Not shown	Software	Software	Not shown	Not shown	Not shown	Not shown
Gen CompLaw	Software	Stored ID	Not shown	Software	Person	Not shown	Not shown	Not shown	Software
Leagully	Software	Stored	Person	Software	Software	Person	Person, in app	Person, in app	Software
CSTrax	Software	Person	Person	Person	Person	Not shown	Person	Person	Not shown
AutoROC	Software	Person	Person	Person	Person	Person	Person	Person	Person

Vendor detail

Tool	What it shows	SPICe+	Open point
ComplyRelax	Windows client agent, installed as administrator. User adds MCA ID and password, then submits without logging in to the portal each time. Three-day e-form trial. Forms can be prepared with no MCA login. Its AI assistant page says that tool does not submit.[1,2,3,4,5]	Not confirmed	What the agent does, what passes through the gateway, and where the password stays.
Gen CompLaw (SAG)	Desktop software. User picks an MCA V3 ID. Software saves the form on the portal. User previews and submits, then downloads PDFs from the software. Listed at about $106 to $212 a year.[6,7,8,9]	**Yes**, in a 2022 guide and the product page	Whether the flow is current. Whether it accepts data from another system.
Leagully	User adds MCA logins. On filing, the user types the OTP. Submission runs in the background. Status moves to pending for DSC, then pending for payment. ₹4,750 to ₹30,400 a year plus GST.[10,12]	Not seen	SPICe+ coverage. What its "DSC vault" stores.[11]
CSTrax	Fills MCA forms from company data. User downloads the form and submits on the portal. Direct submission is on its roadmap. It says Gen CompLaw files directly today.[13]	Not seen	Roadmap date.
AutoROC	Makes a pre-filled reference as PDF or JSON. Staff enter it on the portal and record the SRN. It says the tool does not file directly.[14]	No	None.

Why the flows look like this

Portal fact	Effect on tools	Source
Business users receive an OTP on mobile and email at login.	A stored password does not remove the person. Leagully asks for the OTP in its app.	MCA FAQ, 2023[23]; Leagully[10]
Web form is submitted, then a PDF is downloaded, signed and uploaded.	Software can stop at "pending for DSC" until signers act.	MCA FAQ[22]; WeeDoo[33]
Every first subscriber and director must be a Business User and associate a DSC.	Each signer needs setup before filing. No tool here shows this step done for them.	MCA FAQs[23,24]
Upload within 15 days of SRN. Pay within 7 days of upload.	Tools add value with status tracking. A missed date cancels the SRN.	MCA FAQ[22]

The same login files Part A, Part B and the linked forms.	A tool must keep one login for the whole filing.	MCA FAQ[23]
Editing a submitted Part B discards linked-form data.	Refill by software saves real time on corrections.	MCA FAQ[23]
One guide says Aadhaar eSign is not accepted. A 2026 consultation lists Aadhaar OTP only as an option.	Plan for DSC. Do not plan for a change yet.	eDarpan[34]; IICA[27]

> **Inference:** With no published filing API, these tools most likely work through the portal itself, by driving a browser or by reproducing its web requests. A local agent would let portal traffic start from the user's PC. No vendor states this. Ask each vendor directly.

Risks that the market does not remove

Risk	What the sources say	Action
Login custody	MCA's policy prohibits unauthorised use and password misuse. It does not address software that acts for an authorised user.[25]	Ask a CS before giving any vendor a real login.
DSC control	The IT Act penalises fraudulent or dishonest use of another person's electronic signature or password.[30] An ICAI committee held the owner responsible for DSC safekeeping.[31]	Keep each signature under its owner's control.
Certification	A 2026 ICAI order found misconduct where a professional certified INC-32 without proper checks.[32] Software does not move this duty.	Keep a recorded professional review.
Automated access	MCA can deny service to users who cause unusually high access, manual or automated.[25]	Ask vendors about blocks and warnings.
Local agent	An agent installed with administrator rights has wide access to that PC.[1,2]	Test only on a separate PC with no client data.
Portal change	MCA is consulting on form consolidation, more straight-through processing and new pre-filled filing.[27]	Ask how fast each vendor repairs a change.

What this means for VCFO Suite

Finding	Meaning
Gen CompLaw is the first demo	It is the only tool here with a shown SPICe+ path. The key question is whether Suite can send it data.
Stored login is the market norm	All three acting tools use it. That gives speed and creates custody risk. It is a legal decision for SBC, not a technical default.
An open position exists	This review found no vendor that fills forms inside the user's own browser session with no stored login. The one extension found fills login data only.[21] `vcfo_assist` follows that design, but nobody has tested it on the live portal.
Typing may not be the main delay	AutoROC argues that chasing client details costs more than the upload.[14] Time three SBC filings before choosing a route.

Five questions for every demo

1. Show SPICe+ Part A, Part B and the linked forms on a live filing.
2. Do you drive a browser or send requests? Which machine contacts the portal?
3. Where do MCA passwords stay, and who can read them?
4. How do you handle captcha and OTP? Which steps need a person?
5. Can VCFO Suite send you data by API or import file? Which MCA document permits your method?

Limits of this review

Facts come from vendor pages, vendor videos and public documents, and no tool was tested. Some sources are old or secondary, and the MCA FAQ dates from 2023. ComplyRelax's site blocked some page reading, so its facts come mainly from its 2026 videos. Reddit and Twitter were not available. Companies Act points need confirmation by a CS or counsel.
